Annual Report 2020
As a core function of Montgomery County, Environmental Services exceeded expectations during the global pandemic by offering additional resources. For example, our Solid Waste District managed a significant increase in tonnage and the Environmental Learning Center found ways to virtually provide resources and hold contests for students.

The County supported those struggling financially during the pandemic by allowing the Customer Service team of Water Services to temporarily suspend shut-offs in the spring of 2020. In some instances, customer service representatives notified citizens that CARES Act funding was available to assist with gas and electric utilities through DP&L and Vectren.

Environmental Services’ employees achieved the perfect balance of efficiency, innovation, dedication and compassion during these challenging times, and I am extremely thankful for them. Montgomery County Environmental Services will continue to do great things with its exceptional leadership and commitment to our residents.

I have seen this department perform in incredible ways in my first year as director. We have jumped through major project hurdles, a large scale water main break from our supplier, and of course, the global pandemic.

When Coronavirus (COVID-19) came to our community, our department’s leaders quickly came together to determine the immediate actions needed to keep utilities running. This meant identifying frontline, essential workers and configuring schedules with those who could still provide exceptional work from home. I am proud of how our team responded and adapted to safely serve our residents.

With more residents at home, our Solid Waste District saw a significant increase in trash and recyclables dropped off at our facility in Moraine. As residents cleaned out their homes, our SWD employees continued to interact with the public while maintaining the highest safety precautions.

Our wastewater treatment plants were selected to participate in COVID-19 wastewater surveillance. Monitoring raw wastewater in sewage collection systems can detect early signs of disease spread in a community. Our data was then sent to the United States Environmental Protection Agency for analysis and can be viewed by the public on the Ohio Department of Health website.

We were also able to navigate many engineering projects, including the Sanitary Modernization and Revitalized Treatment (SMART) project. This project was initially designed to replace a sewer force main at our Western Regional Water Reclamation Facility in Moraine, but after a detailed condition assessment, we found the force main is in great shape for its age. The scope of the project was then revised to re-use our existing infrastructure and save ratepayers a significant amount of money. Although there will still be construction, the project will not be nearly as large or invasive as previously thought.

In early August, the City of Dayton experienced a large water main break near its Keowee Street water plant in Downtown Dayton. As a supplier to Montgomery County, this outage quickly impacted our systems. County employees from field services, customer service, GIS mapping, engineering, water reclamation, communications and several other departments came together that day to create a strategy and ensure water was available to our customers. After several hours, the City of Dayton was able to restore water levels to residents, and therefore increase our water levels to safe zones.

Before my promotion to director in early 2020, I worked as an employee of Montgomery County Environmental Services for 16 years. I always knew that this department could come together during a crisis, but I am honored to see it first-hand as the director and I am so proud of our team. Thank you to our residents for trusting us with your essential services.

Sincerely,

Michael B. Colbert
Montgomery County Administrator

Matt Hilliard
Director of Environmental Services

2020 Reports of Water in Basement (WIB)/Sanitary Sewer Overflow (SSO)

Customers contact Montgomery County when there is a sewer backup problem. A field services team member visits the site of every event. This investigation determines if the event was caused by a failure in the Montgomery County sanitary sewer system. If the event is determined to be a result of a Montgomery County sanitary sewer failure, a work order is created to resolve the situation. All confirmed SSO and WIBs are shown as “reported” below.

In 2020, the Montgomery County Solid Waste District provided $342,176.21 in grant funding to local communities, businesses, schools and nonprofit organizations. Funding is used to enhance, increase and promote recycling, waste reduction, and the end-use market of recycled materials in Montgomery County.

In the 2019-2020 grant cycle, two organizations received funding to purchase recycled-content material through the Buy Recycled Grant. Chaminade Julienne Catholic High School utilized its funds to purchase recycled-plastic recycling bins to improve access to its in-school recycling program.

The University of Dayton received a Business Incentive Grant to purchase an in-vessel composting unit to process food waste scraps from cafeterias, sports venues and other on-campus activities where food scraps cannot be sent to local food rescue outlets. This grant allows the University of Dayton to continue its mission of creating a sustainable future for students and Montgomery County.

Eleven municipalities and one organization received a District Incentive Grant in 2020. Of these, the City of Riverside utilized funds to replace and refurbish old playground equipment using recycled-plastic material. Additionally, Riverside replaced playground surfaces with rubber mulch made from recycled tires. By using recycled materials that do not require replacement as often as other materials, the City has been able to reduce maintenance costs.

New Service Recycling Grants were awarded to 23 businesses in 2020. For the first time in this grant’s history, the County awarded a food waste collection grant. Instead of sending its organic waste to the landfill, Ghostlight Coffee will now divert organic material from its café to a food waste composting facility. Hauling companies that participated in the 2020 New Service Grant were Rumpke and GoZero.

### 2020 District Incentive Grants
The District Incentive Grant provides funding opportunities to the 28 member communities that make up the Montgomery County Solid Waste District. Funding can be used for projects that create or enhance recycling opportunities within the respective community.

Five-Year Plan for 2019-2023

Ohio enacted House Bill 592 in 1988, which directed solid waste districts to reduce reliance on landfills and increase efforts to reduce, reuse and recycle. The bill also mandated that solid waste districts create a Five-Year Plan to outline operations and educational efforts to reduce waste sent to landfills. The Montgomery County Solid Waste District completed its Five-Year Plan for 2019-2023. The plan completed the ratification process and received 100% approval from all of our local jurisdictions and was approved in April 2019 by the Director of the Ohio Environmental Protection Agency. The District began implementing the Five-Year Plan pursuant to the Director’s approval.

Yard Waste Drop-Off

Montgomery County operates a free drop-off for residents to properly recycle yard waste. Clean, separated, organic materials are accepted.

In 2018, the SWD was awarded a Community Development Grant from the Ohio EPA to assist with the purchase of a horizontal grinder. The grinder was purchased in early 2019 and has been in operation since May 2019. The machinery is used to complete a first grind of yard waste and untreated wood that is diverted from the SWD’s tipping floor/normal solid waste stream.

The Five-Year Plan can be found online at www.mcohio.org/MCSWDFiveYearPlan.pdf. For more information, please contact John Minear at 937-225-4999.
